Synology®

brought to you by tools4tech

Private cloud backups

shermanit has built a private cloud based on Synology's architecture. This next generation solution allows us to securely backup and protect your data across various devices including on-premise servers, desktops, laptops, Office 365, SharePoint and Dropbox
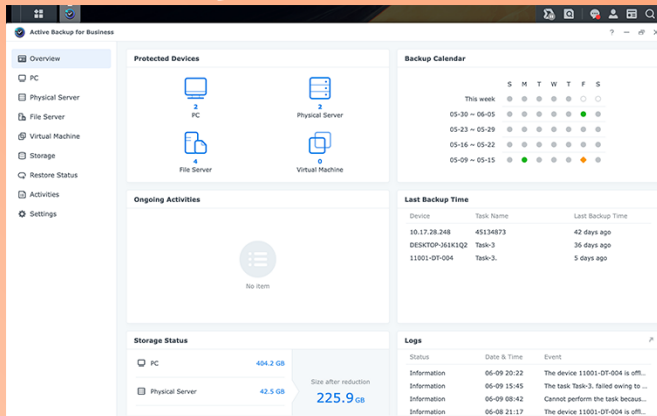

"Backup your business, not just your data"

We monitor your backups for FREE

The importance of cloud backups

- Having a cloud backup solution will ensure that your data will be stored offsite for a full disaster recovery. This follows best practice of having at least three copies one of which is offsite.

- All your data is protected with 256-bit military grade encryption, making it impossible to be compromised.

- Devices such as your PC's, laptops, workstations, and virtual machines can work whilst the backup is running.

- Our Synology private cloud is 30% more affordable than any enterprise cloud backup solution.

- There are no setup costs and no other license fees- pay for your stored data only.

- Having a private cloud data solution will give you peace of mind as it protects your business from ransomware.

- It allows you to maximize your backup efficiency by global deduplication, which reduces the storage by eliminating duplicated files across platforms and machines.

- Changed block tracking is a feature that will only copy small amounts of your data when a file changes, which will reduce the backup window and avoid link saturation.

Pricing

Cloud Storage	Base package	Overages
10GB	R35	R3.50/GB
50GB	R105	R2.80/GB
100GB	R175	R2.10/GB
500GB	R770	R1.85/GB
1000GB	R1400	R1.65/GB
2000GB	R2555	R1.40/GB
4000GB	R4795	R1.20/GB
